

UTILITY CONNECTIONS

Water will be supplied through connected hoses with an inner diameter of 12.5 mm and disposed of through connected hoses with a diameter of 32 mm. Compressed air will be supplied through connected hoses with an inner diameter of 12.5 mm. Hoses with different diameters and/or adapters must be provided by the Exhibitor or ordered from BuildExpo (if available).

ATTENTION! The Organiser will only ensure the connection of standard sanitary appliances ordered through the Exhibitor's management.

Hoses will be connected to the Exhibitor's appliances/equipment, and the connections will be **maintained during the exhibition period by your company's personnel or the Builders of your stand.**

Electric power, water, and compressed air will be supplied to stands only during exhibition opening hours. **If you need the connection** of water or compressed air **earlier to adjust the equipment**, please obtain the relevant approval from the Organiser **5 working days before set-up.**

Utility lines (cables, hoses) of your stand must be covered. The utility lines must be laid by the Exhibitor's personnel or the Builder of your stand. Cord protection covers can be rented from BuildExpo.

During set-up and dismantling, you should use battery-powered tools or connect your professional extension cord to one of the sockets in the pavilion. Protect the extension cable from mechanical damage.

Please turn off the lighting at the stand at the end of the working day for fire safety reasons. The General Builder of the Crocus Expo Exhibition Centre reserves the right to disconnect the general power supply to the stand from the exhibition complex networks if the lighting has not been switched off by the participant.
